ABSTRACT

This study aims to determine the strategy of the Yogyakarta City Tourism Office in developing tourism during the COVID-19 pandemic. Since the emergence of COVID-19, all tourist destinations in Indonesia, especially in Jogja, have experienced a setback until they reached a crisis period; this is due to the decline in economic activities, tourists, and lodging travel services and other entertainment activities. This study used a descriptive method with a qualitative approach; the data in this study came from online media, social media and the Yogyakarta government website. The data is analyzed using NVIVO 12 plus software to get maximum results and display maximum results visualization. The results of this study: First, to support the tourism sector, which is in a state of crisis, the city government of Jogja provides tourism facilities and infrastructure with the Covid-19 health protocol guidelines, limiting travel time and limiting the number of tourists. Second, the government collaborates with interested actors to reopen tourism destinations to encourage tourists to be more obedient and obedient to implementing health protocols. Third, the government also encourages people to always refrain from carrying out tourism activities; this is done to minimize contact and reduce the spread of COVID-19 through the tourism sector.

1 INTRODUCTION

Tourism is one of the tourism activities supported by the community, government, and entrepreneurs' various service facilities [1]. Meanwhile, tourism is an activity for an individual or group for recreation, personal development, or knowledge in a temporary period [2]. The realization of tourism is the interaction of humans and tourism, namely humans as (producers) of parties that offer tourism and tourism products and services (consumers) or parties who travel on tours or tourists [3].

The tourism sector is still one of the factors expected in tourism development. Because it is considered to be able to create income that can protect and preserve culture and the environment and directly touch the local community [4], this is considered as an economic driver of a region or a country; therefore tourism is considered to be able to overcome welfare problems [5]. This is an opportunity for the state to take advantage of the tourism sector and support its development because it is likely that the unitary state of the Republic of Indonesia will reap revenue from the tourism sector, which will be in state revenue and will be channeled to its citizens. So there is a need for a strategy for the local government in tourism development planning to be developed optimally [6]. for that, strategy tourism development can be seen from several factors, namely: a) provision of tourism facilities and infrastructure; b)

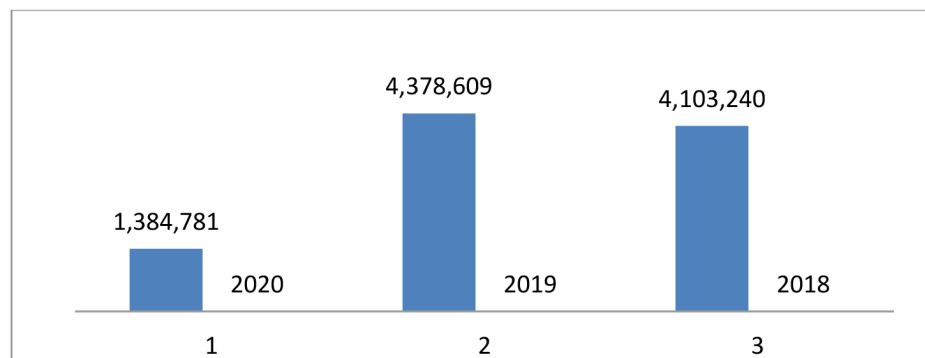

Figure 1: Total visits travelers 3 years. Source: Department of the city of Yogyakarta tourism 2018-2020

tourism object development; c) increasing community participation; and d) increasing the participation of the private sector [7, 8].

In tourism development, it is not only the government that does it alone, but there are other parties such as through government and private approaches [9, 10]. government policies in the development of the tourism sector, which are included in Law no. 10 of 2009 concerning tourism, says that the government and regional governments have an obligation in tourism development [11, 12]. The tourism sector in Indonesia is elementary to develop [13]. For this reason, Yogyakarta Special Region is an area known as a city of struggle, a cultural center, a center for education and tourism. So that the city of Yogyakarta becomes a tourist destination from various regions and abroad. There are several categories in tourist destinations: beach, mountain, and cultural destinations, however, during the current pandemic. Tourism is one of the sectors most affected by Covid-19, one of which is the decline in tourist visits. There is a need for a development strategy from the Yogyakarta city tourism office during the current pandemic.

Figure 1 illustrates the developments related to the number of tourists visiting Yogyakarta in the last three years. In 2018 the number of tourists reached 4,103,240, then in 2019, the number reached 4,378,609, but in 2020 the number of tourists who came has decreased drastically, namely 1,384,781 people. This is due to the increasing number of covid-19 cases in Indonesia. Coronavirus or covid-19 itself began to enter Indonesia in 2019; besides that, its spread is very fast, so that it has an impact on the tourism sector. One of the impacts felt in tourism development is the regional economy. Therefore, this study wants to find out how the Yogyakarta City Tourism Office's strategy in developing the tourism sector during a pandemic.

2 METHOD

This type of research used in this research is a descriptive research method using a qualitative approach. Qualitative descriptive research is a type of research that emphasizes the results of research [14]. This study describes the Yogyakarta City Culture and Tourism Office's strategy in developing the tourism sector during a pandemic. Therefore, the data was taken during the last three years, from 2018-2020. This study's data sources came from various literature or literature reviews from various previous studies, news, the website of the Jogja city statistical center agency and the tourism

service website. Kota Jogja, this is to support the implementation of tourism development in the new standard era. For this reason, this study wants to know the stages and strategies of the government and the tourism office towards the development of the tourism sector during the pandemic (figure 2). According to Primadany, the tourism development stage has four measurable indicators[8], namely;

Based on figure 2, the researchers analyzed tourism development strategies during the COVID-19 pandemic by using infrastructure indicators, developing regional tourism objects, involving active community participation, and involving private involvement.

3 FINDING AND DISCUSSION

Yogyakarta is one of Indonesia's most crowded tourist destination cities and is visited by many tourists, both local and foreign [15]. Welcoming the new normal and the opening of tourism in Yogyakarta, the government has prepared a health protocol following the Standard Operating Protocol (SOP) in tourist attractions and restaurants [16]. This is the government's step in developing tourism in Yogyakarta. In the development of tourism in Yogyakarta, there are specific strategies, namely, the availability of infrastructure, the development of regional tourism objects, community involvement, and the private sector [8]. With the existence of Covid-19, which resulted in a decline in the tourism sector, a strategy is needed in its development. Table 1 below explains the number of tourist destinations in the city of Jogja.

Table 1 describes the types of tourism offered by the Yogyakarta city tourism office. Of the seven types of tourism, in which tourists can visit various places. The first is Yogya City Tourism Village; in the tourist village, 17 places can be visited. The second is the Museum Tour, in which there are 17 tours. Then the third Historical and Cultural Tourism has 18 tourist destinations. The fourth is Religious Tourism, which has five places that can be visited. The fifth culinary tour has 14 culinary spots to offer. Next, the sixth, Kotabaru Tourism, has 25 places for health and education and others on offer. Moreover, the destination is Taman Pintar Tourism, in which three places can be visited. Tourism in Yogyakarta has an impact on the economy [17].

The number of tourism in the city of Jogja has decreased significantly due to Covid-19, so that not only has an impact on health but also on the tourism sector and results in a downturn in the regional

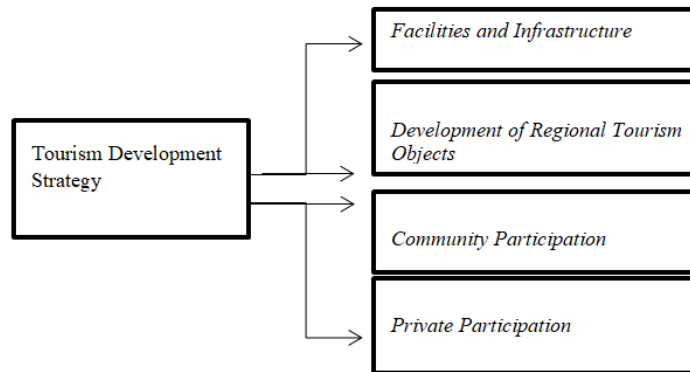

Figure 2: Tourism Development Strategy

Table 1: Jogja city tour list

No	Destination	List
1	Yogya City Tourism Village	Kampung Wisata: Tahunan, Dipowinatan, Purbayan, Prenggan, Taman Sari, Kauman, Kadipaten, Pandean, Becak Maju, Rejowinangun, Pakualaman, Cokrodiningratan, Warungboto, Niti Gedongkiwo, Syaiban, Sasromenduran, Dewa Bronto.

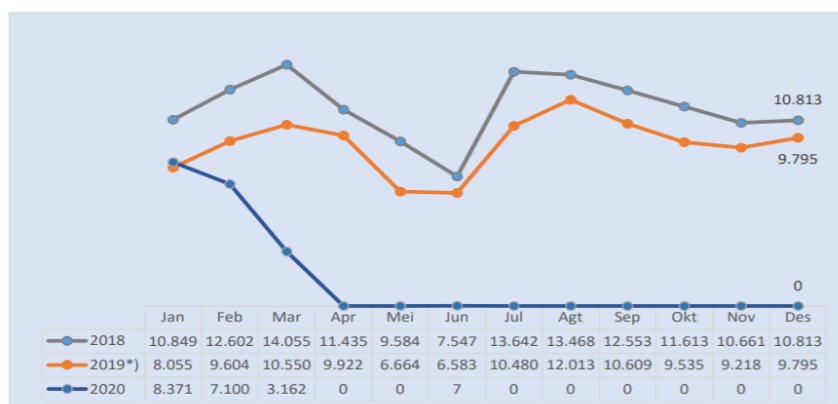

Figure 3: Development of number of foreign tourist visits. Source: Yogyakarta City Statistics Agency 2018-2020

economy and society [18]. In 2019 the number of tourist visits was recorded at 4,378,600 people, so in 2020 the number of visits was only 1,384,781 people. This incidentally is a street vendor because no tourists arrive during the pandemic, plus a government policy that requires locking down to stop the coronavirus spread.

The tourism sector is one of the sectors most affected by the Covid-19 pandemic era, since the imposition of large-scale social restrictions in several regions with various variations, it has limited people's movement from one city to another [19, 20]. This was accompanied by the government's appeal to temporarily stay at home to prevent the spread of the Covid 19 disease so that the number of tourists decreased and even almost none. The low level of foreign tourist visits to DI Yogyakarta in the last ten months is the impact of the outbreak of the Covid-19 outbreak, which has yet to subside. Figure 3 describes the development of foreign tourists to the Yogyakarta area during the last three years.

Ten largest countries of origin for foreign tourists who dominated visits to the Special Region of Yogyakarta in the January-December 2020 period, namely Malaysia, Singapore, Japan, Germany, China, United States, India, France, United Kingdom and Australia. The number of foreign tourist visits from the ten highest-ranking countries reached 78.67 percent of the cumulative total number of foreign tourist arrivals to the Special Region of Yogyakarta from January to December 2020. Cumulatively, from January to December 2020, compared to the same period the previous year, there was a decrease. Visits amounted to 83.51 percent [21].

Figure 3 shows the instability of visits from foreign tourists, and this is due to the covid-19 that has hit various countries in the world, one of which is Indonesia. The increasing spread of the virus has an impact on the tourism sector. Therefore, the government has urged the public and foreign tourists not to travel outside the city, region or country. With this policy so that the number of tourist visits has decreased and impacts the regional economy and society. The increase in the spread of covid-19 is considered very severe and has impacted tourism development over the past few years [16]. the government needs to restore tourism with specific strategies [22]. The tourism development strategy is an effort to realize integrated tourism development to attract tourists [23]. In the post-covid development of tourism in the city of Jogja, it has

several indicators; Provision of targets, development of regional tourism objects, community participation, and the private sector's role. The results of tourism analysis in the post-pandemic tourism development strategy in Yogyakarta can be seen in figure 4

3.1 Provision of facilities and infrastructure for tourism objects in the city of Yogyakarta

Tourism development needs to be well prepared and mature in its policies, and this is to support the smooth running of the tourism sector [24]. To carry out its functions and roles in tourism development, the local government must make various efforts to develop facilities and infrastructure after Covid-19 hit Indonesia's country, which has an impact on the tourism sector. The Covid-19 outbreak had a severe impact on the tourism sector [21]. Thus, after entering the new normal, there are suitable facilities and infrastructure, namely, providing basic needs that will determine the success of an area to become a tourist destination. For that, the facilities available can provide services to visiting tourists. Tourism facilities are divided into three essential parts: Main Tourism Facilities (main tourism superstructure), then Supplementing Tourism Superstructure and Supporting Tourism Superstructure [20]. of the three facilities have the same purpose, where the main facilities of tourism for companies whose lives and lives are very dependent on the arrival of people who travel on tour.

Meanwhile, tourism complementary facilities, namely, for companies or places that provide recreation facilities whose function is to complement the main tourism facilities, may also stay longer in a tourist destination. Tourism Supporting Facilities Complimentay facilities and basic and functional facilities make tourists stay longer in a tourist destination but have another function, namely, make tourists or visitors to tourist destinations spend more and spend more money at their tourist destination visit [25, 26]. Facilities and infrastructure are essential factors that can support the tourism industry's development by creating satisfaction from tourists [27]. Yogyakarta is one of Indonesia's most crowded tourist destination cities and is visited by many tourists, both local and foreign, welcoming the new normal and the opening of tourism in Yogyakarta,

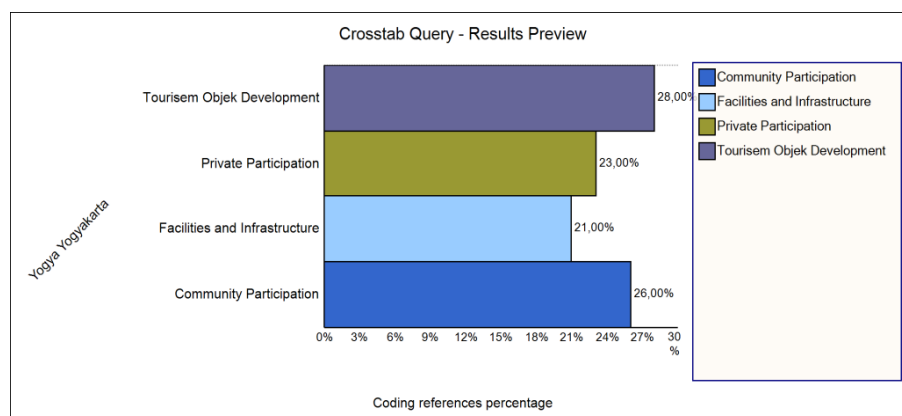

Figure 4: Post-covid tourism development strategy. Source: Twitter jogja Yogyakarta (NVivo 12 plus).

the government has prepared a health protocol following the Standard Operating Protocol (SOP) in tourist attractions and restaurants [28].

This is the government's step in developing tourism in Yogyakarta. In the development of tourism in Yogyakarta, there are specific strategies, namely, the availability of infrastructure, the development of regional tourism objects, the involvement of the community and the private sector [29, 30]. With the existence of Covid-19, which resulted in a decline in the tourism sector, a strategy is needed in its development. Table 1 describes the number of tourist destinations in the city of Yogyakarta. Provision of existing infrastructure in the city of Jogja after the new normal has been implemented following the decision of the Indonesian Ministry of Health in No. H.K.01.07 / MENKES / 382/2020 and the decision of the mayor of Jogja No. 51 of 2020. This is to prevent an increase in the spread of Corona visits in Indonesia and Jogja. For this reason, tourism in the city of Jogja has been carried out effectively and efficiently.

3.2 Development of regional tourism objects

Development in the tourism sector is an effort to develop and manage tourist objects and attractions owned by an area to be even better [11]. Each region has a beautiful natural wealth and a variety of cultural and artistic traditions and different relics and antiquities. Yogyakarta City Tourism Office is an agency authorized to manage and develop tourist objects in Yogyakarta. In developing tourism, of course, it will require infrastructure development to come to tourist destination areas [27].

The development of tourism attraction is meant by the origin of 15 paragraph (3) letter d, namely, the *Kraton - Malioboro* area and its surroundings as a tourism area based on culture and urban life. Other than that, there are ways of developing it to cover: (a) *Kraton Ngayogyakarta Hadiningrat*, *Taman Sari*, *Sonobudoyo Museum* and *Railway Museum* as cultural heritage areas *Kraton Tourism*; (b) *Masjid Gede*, *Suronatan*, *Kauman* and its surroundings as historical, religious and educational tourism areas; (c) *Njeron Beteng* as a tourism area based on Javanese culture; (d) *Malioboro* as a cultural heritage area and a shopping tourism corridor; (e) *Ketandan* and its surroundings as a Chinatown village area; (f)

Ndalem Mangkubumen-Ndalem Pujokusuman Puro Pakualaman as a conservation area and Javanese art performance; (g). the Philosophy Axis area as an educational, cultural, and historical tourism area; (h). the cultural heritage zone in *Pakualaman*; (i) the cultural heritage area of *Kotabaru*; (j) the cultural heritage area of *Kotagede*; (k) *Maguwoharjo* area as an area for family tourism and sports; (l) universities and schools in urban areas as educational tours; (m) the revitalization of *Gembira Loka* as a tourism education on fauna and family recreation; (n). *Ngasem-Ngabean* as a village for culinary and handicraft tourism; (o) green open space; and (p) Tourism Health-wellness, and traditional and modern beauty as a new tourist attraction.

As for the rarity of the Government of Yogyakarta in developing the tourism sector during the pandemic and after the new standard era, namely, with the experimental stage and limiting visits from tourists visiting tourist attractions [28, 31]. This is a prerequisite for the opening of tourism during a pandemic. This application can monitor and record tourists who enter tourist sites systematically and adjust to the capacity of the tourist location you want to visit. With the Jogja pass application, it can track the identity of tourists who want to travel in this particular area of Yogyakarta safely and comfortably.

3.3 Community participation

Community participation in the tourism sector can be seen from two indicators. Namely, an active role is carried out directly, both individually and collectively, which consciously helps government programs with initiatives and creations involve themselves in tourism exploitation activities or fostering a sense of belonging among the community [32]. The passive role is the emergence of public awareness not to carry out activities that can disturb or damage the natural environment around tourist attractions [32, 33]. There are two perspectives on community participation in tourism: local community participation in the decision-making process and the benefits that people receive from tourism development [29].

The involvement of the community in tourism development during the current pandemic is significant and influential because, with the opening of tourism after entering the new average era, it is not only the government that plays a role in carrying out the role

Figure 5: JogjaYogyakarta Twitter data after the pandemic.
Source: Processed by researchers using World Cloud NVivo 12 Plus (2021).

of the community, one of which is by following the appeal of the government and obeying it, because with the covid-19 so that the impact reaches the community economy [34]. Therefore, people are asked to always comply with the government's recommendations, as for compliance with government policies in emphasizing the spread of covid-19 in Yogyakarta. Both the public and tourists have followed and implemented it in everyday life, namely by using a mask when leaving the house, washing hands, using a hand sanitizer and keeping a distance. Things like this can help develop and develop tourism in the city of Yogyakarta during a pandemic.

3.4 Private participation

Apart from the government and society, the private sector also has a role in tourism development [35]. The private sector's participation in tourism development is needed to support tourism [4]. The private sector's role is involved as a provider and service provider in the area around tourism. Its role is in the form of assistance, verification, certification. Certification by a certification body then marks the destination or business as meeting the tourism operator's requirements. However, with the current covid-19, the Yogyakarta city government is significantly extra in making policies during the pandemic period. Which city of Jogja is very different from other cities, where when Covid-19 began to enter Indonesia, several cities had locked down; this was due to the increasing spread of Covid-19. However, at that time, the city did not close access or impose quarantine for incoming out-of-town visitors.

The Yogyakarta Regional Government only suppresses the spread of Covid-19 by instructing each regency/city government of Jogja to be more selective in granting activity permits. Considering that the private sector's role in tourism development is to provide for local and foreign tourists' needs, both in terms of hotels, preparation, and restaurants and restaurants, with the current covid, the private sector is also affected. However, after entering the new average era and the opening of tourist attractions, the private sector's increase began to improve. This can be seen from tourists who are starting to arrive and shopping centers and inns and hotels that are starting to open. Figure 4 is the information provided by the JogjaYogyakarta Twitter account.

Figure 5 is the information provided by the @JogjaYogyakarta Twitter account regarding developments in the tourism sector. In picture four above, the word that often appears from four indicators of tourism development in 2020 is to be alert to the spread and transmission of Covid-19 in the Malioboro area.

4 CONCLUSION

The action of the Jogja city government by opening tourism when it is new to normal is to provide infrastructure advice that is following health protocols, and this is following the decision of the Ministry of Health and the Mayor of Jogja; the goal is to stop the spread of the coronavirus (Covid-19). Then the next step is rare by limiting tourist visits to tourist attractions. Besides that, the government also provides the Jogja Pass application. This application becomes an identity for residents or tourists who want to travel in a particular area of Yogyakarta safely and comfortably. In development and tourism development, the city government of Jogja expects an active role from the surrounding community, especially during a pandemic. Therefore, the Yogyakarta City Tourism Service in enhancing the community's role, namely, by incessantly conducting education and outreach to the community, especially business actors in the tourism sector. By utilizing outdoor media, television media and social media, the local government strives to adapt to new habits when the tourism industry starts operating again. The private sector's role is involved as a provider and service provider in the area around tourism. Then, the private sector's role in the tourism sector is in the form of assistance, verification, certification. The four indicators above are connected to support tourism development during a pandemic, so there is a need for tight control from the government. For the development of tourism, Jogja's city has been carried out following the SOP so that it takes place effectively.
